Aims and Scope

The JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS publishes original papers of high scientific value in all areas of applied mathematics. The main interest of the Journal is on papers describing new computational techniques for solving real scientific problems. Also carefully tested algorithms are published.
The Journal will also concentrate on the interaction between different fields of applied mathematics. In this connection survey papers and bibliographies are published.
The Journal does not publish papers that are too technical or are of very specialized nature. The papers should be readily understood by readers whose speciality lies outside the subject area.
The 'Letter Section' contains short communications and comments of at most three journal pages, which are published as rapidly as possible.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the Publisher, Elsevier Science B.V., Copyright & Permissions Department, P.O. Box 521, 1000 AM Amsterdam, Netherlands.

Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.

Special regulations for readers in the United States – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, United States. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. The fee indicated on the first page of an article in this issue will apply retroactively to all articles published in the journal, regardless of the year of publication. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the Publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.
Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

♾ The paper used in this publication meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper).

JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS

Author Index to Volumes 71–80

(For the sake of simplicity and uniformity, all names beginning with articles or prepositions are listed as if written as single words.)

Abad, J. and **Sesma, J.,** A new expansion of the confluent hypergeometric function in terms of modified Bessel functions — **78** (1) (1997) 97–101
Abdella, K. and **H. Rasmussen,** Electrohydrodynamic instability of two superposed fluids in normal electric fields — **78** (1) (1997) 33– 61
Abdou, M.A., Fredholm integral equation of the second kind with potential kernel — **72** (1) (1996) 161–167
Acker, A., E. Kadakal and **K.G. Miller,** A trial-free-boundary method for computing Batchelor flows — **80** (1–2) (1997) 31– 48
Adamchik, V., On Stirling numbers and Euler sums — **79** (1–2) (1997) 119–130
Agarwal, R.P., see **Sheng, Q.** — **80** (1–2) (1997) 49– 70
Agarwal, A.N. and **P.M. Pinsky,** Stabilized element residual method (SERM): A posteriori error estimation for the advection–diffusion equation — **74** (1–2) (1996) 3– 17
Alfeld, P., M. Neamtu and **L.L. Schumaker,** Fitting scattered data on sphere-like surfaces using spherical splines — **73** (1–2) (1996) 5– 43
Alwash, M.A.M., Periodic solutions of a quartic differential equation and Groebner bases — **75** (1) (1996) 67– 76
Amodio, P. and **L. Brugnano,** Parallel implementation of block boundary value methods of ODEs — **78** (2) (1997) 197–211
Ananthakrishnaiah, U., see **Rai, A.S.** — **79** (1–2) (1997) 167–182
Anastassiou, G. A. and **A. Bendikov,** A sharp error estimate for the numerical solution of multivariate Dirichlet problems — **75** (2) (1996) 215–229
Andersson, B., see **Babuška, I.** — **74** (1–2) (1996) 51– 70
Androulakis, G.S. and **M.N. Vrahatis,** OPTAC: a portable software package for analyzing and comparing optimization methods by visualization — **72** (1) (1996) 41– 62
Ang, D.D., A. Pham Ngoc Dinh and **D.N. Thanh,** A bidimensional inverse Stefan problem: Identification of boundary value — **80** (1–2) (1997) 227–240
Aptekarev, A.I., A. Branquinho and **F. Marcellán,** Toda-type differential equations for the recurrence coefficients of orthogonal polynomials and Freud transformation — **78** (1) (1997) 139–160

Arbogast, T., S. Bryant, C. Dawson, F. Saaf, C. Wang and **M. Wheeler,** Computational methods for multiphase flow and reactive transport problems arising in subsurface contaminant remediation **74** (1–2) (1996) 19– 32
Argyros, I.K., Concerning the convergence of inexact Newton methods **79** (1–2) (1997) 235–247
Aston, P.J., A. Spence and **W. Wei,** Hopf bifurcation near a double singular point **80** (1–2) (1997) 277–297
Avdelas, G. and **T.E. Simos,** A generator of high-order embedded P-stable methods for the numerical solution of the Schrödinger equation **72** (2) (1996) 345–358
Axelsson, O., The stabilized V-cycle method **74** (1–2) (1996) 33– 50
Axelsson, O. and **H. Lu,** A survey of some estimates of eigenvalues and condition numbers for certain preconditioned matrices **80** (1–2) (1997) 241–264

Babovsky, H., Recognition of ring pairs in the data analysis of Cherenkov detectors **72** (2) (1996) 227–234
Babuška, I., see **Tsuchiya, T.** **79** (1–2) (1997) 41– 66
Babuška, I., B. Andersson, B. Guo, J.M. Melenk and **H.S. Oh,** Finite element method for solving problems with singular solutions **74** (1–2) (1996) 51– 70
Bai, Z., M. Fahey and **G. Golub,** Some large-scale matrix computation problems **74** (1–2) (1996) 71– 89
Bai, Z.-Z., On the convergence of parallel chaotic nonlinear multisplitting Newton-type methods **80** (1–2) (1997) 317–334
Bainov, D., C. Baotong and **E. Minchev,** Forced oscillation of solutions of certain hyperbolic equations of neutral type **72** (2) (1996) 309–318
Baotong, C., see **Bainov, D.** **72** (2) (1996) 309–318
Barrett, R., M. Berry, J. Dongarra, V. Eijkhout and **C. Romine,** Algorithmic bombardment for the iterative solution of linear systems: A poly-iterative approach **74** (1–2) (1996) 91–109
Bavinck, H., Linear perturbations of differential or difference operators with polynomials as eigenfunctions **78** (1) (1997) 179–195
Beckermann, B. and **G. Labahn,** Recursiveness in matrix rational interpolation problems **77** (1–2) (1997) 5– 34
Bellavia, S., M.G. Gasparo and **M. Macconi,** Partially Updated Switching-Method for systems of nonlinear equations **76** (1–2) (1996) 77– 88
Bellavia, S., M.G. Gasparo and **M. Macconi,** A Switching-Method for nonlinear systems **71** (1–2) (1996) 83– 93
Belytschko, T., Y. Krongauz, M. Fleming, D. Organ and **W.K. Liu,** Smoothing and accelerated computations in the element free Galerkin method **74** (1–2) (1996) 111–126
Benchiboun, M.D., Extension of Henrici's method to matrix sequences **75** (1) (1996) 1– 21
Bendikov, A., see **Anastassiou, G.A.** **75** (2) (1996) 215–229

Surface tension 78 (1) 33
Sylvester's identity 76 (1–2) 13
Symbolic computation 75 (1) 35
Symbolic Faber polynomials 75 (1) 99
Symm's integral equation 75 (1) 131
Symmetric orthogonal polynomials 75 (1) 23

Table of functions 78 (1) 79
Tension 71 (1–2) 383
Tension parameters 75 (1) 147
Tensor surface 71 (1–2) 383
The discrete collocation method 80 (1–2) 335
The iterated collocation method 80 (1–2) 335
Thermistor 79 (1–2) 101
Thin plate functional 73 (1–2) 209
Three-term recurrence relations 75 (1) 23

Three term recurrence relations	78 (1) 139
Time-point relaxation	80 (1–2) 183
Timoshenko beam problem	79 (1–2) 215
Toda lattice	78 (1) 139
Total positivity	71 (1–2) 365
Trace	74 (1–2) 71
Transformations of the measure	78 (1) 139
Trial-free-boundary method	80 (1–2) 31
Triangular grid	73 (1–2) 95
Trigonometric polynomials	75 (1) 131
Trust region	73 (1–2) 119
Tuning by simulation	72 (2) 227
Turning point theory	80 (1–2) 127
Turning points	79 (1–2) 41
Twelfth-degree splines	78 (2) 371
Two-grid method	74 (1–2) 231
Two-phase composites	75 (2) 259
Two-point boundary-value problems	78 (2) 371
Two-point Padé approximation	77 (1–2) 53
Two points boundary value problem	72 (2) 335
Two-step Runge – Kutta methods	76 (1–2) 113
-method	71 (1–2) 177
Unconstrained optimization	80 (1–2) 265
Underlying numerical methods for ODEs	78 (2) 311
Uniform asymptotic expansion	80 (1–2) 127
uniform grid	75 (2) 215
Uniform pseudorandom numbers	79 (1–2) 75, 207
Uniformly convex Banach spaces	75 (1) 77
Unsymmetric successive overrelaxation method	74 (1–2) 331
V-cycle	74 (1–2) 33
Variable memory of dynamical systems	71 (1–2) 67
Variational inequalities	80 (1–2) 105
Variational models	74 (1–2) 217
Vector differential equations	78 (2) 213, 233
Vector epsilon algorithm	77 (1–2) 173
Vector Padé approximant	77 (1–2) 173
Vector-valued power series	77 (1–2) 173
Vertex-modified rules	72 (2) 371
Vertical faults	73 (1–2) 225
Vertical splines	73 (1–2) 241
Viscoelastic waves	76 (1–2) 301
Viscoplasticity	75 (2) 345

Volterra – Hammerstein 76 (1–2) 147
Volterra integral equation 80 (1–2) 227
Volterra integral equations 71 (1–2) 33, 115
Volterra Runge – Kutta methods 71 (1–2) 225
Vortex flows 80 (1–2) 31

Wake 72 (1) 193
Walsh functions 71 (1–2) 237
Wave equation 72 (1) 161
Weakly lower semi-continuous functional 75 (1) 77
Weierstrass functions 76 (1–2) 265
Weighted Sobolev spaces 77 (1–2) 103
Weighted spaces of continuous functions 77 (1–2) 201
Well-posedness 72 (2) 245
Wiener process and simple random walk 75 (2) 215

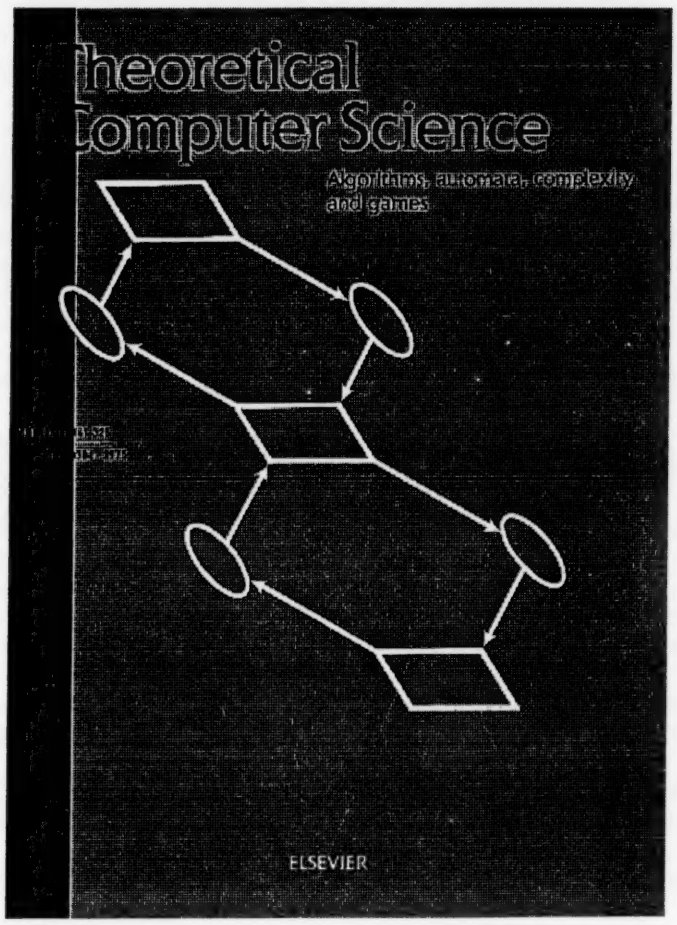
Z-matrix 75 (1) 87
Zero-location problems 76 (1–2) 1
Zerofinding 75 (1) 119
Zeros 71 (1–2) 245, 311
75 (2) 249
Zeros of orthogonal rational functions 77 (1–2) 255

Theoretical Computer Science

Does your institute
subscribe to the journal
Theoretical Computer Science?

Then *you* have *free* access from your desktop to:

- **Abstracts of forthcoming articles**
- **Abstracts of published articles (since January 1994)**
- **Abstracts Direct: the facility to receive abstracts by e-mail**
- **Full text conference Proceedings in ENTCS series**
- **ContentsDirect: the facility to receive forthcoming and published contents by e-mail***
- **Text search facilities**



Facilitate your research!

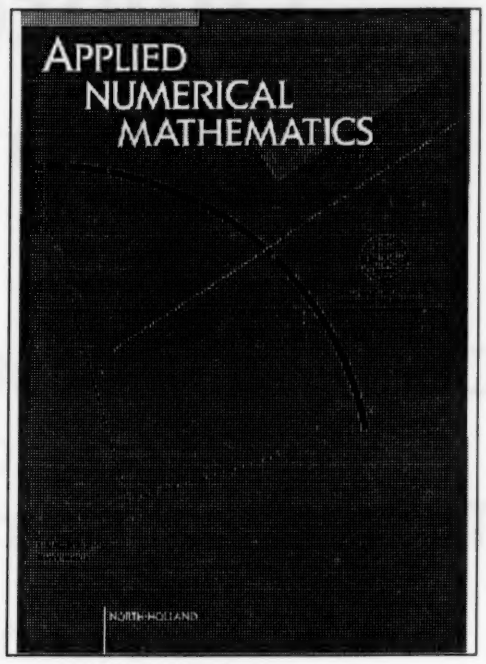
Applied Numerical Mathematics

An IMACS Journal

- **Coverage of the whole area of computational mathematics through research and tutorial papers**



Editors-in-Chief:

R. Vichnevetsky, *Department of Computer Science, Rutgers University, New Brunswick, NJ 08903, USA* and **J.E. Flaherty**, *Department of Computer Science, Rensselaer Polytechnic Institute, Troy, NY 12180, USA*

Senior Editors:

R. Bank, *University of California at San Diego, La Jolla, CA, USA*, **C. Brezinski**, *U.S.T.L. Flandres Artois, Laboratoire d'Analyse Numérique et d'Optimisation, Villeneuve d'Ascq, France*, **J.J. Dongarra**, *University of Tennessee, Knoxville, TN, USA*, **J.M. Sanz-Serna**, *Universidad de Valladolid, Spain*, **H.A. van der Vorst**, *University of Utrecht, The Netherlands* and **J.G. Verwer**, *Centre for Mathematics and Computer Science, Amsterdam, The Netherlands*

AIMS AND SCOPE:

Publishes high quality research and tutorial papers in computational mathematics as well as papers describing relevant applications in such fields as physics, fluid dynamics, engineering and other branches of applied science.

For:
Applied Mathematicians, Computational Mathematicians, Computer Scientists, Physicists, Engineers.

Publication information
Journal of Computational and Applied Mathematics (ISSN 0377-0427). For 1997 Volumes 77–89 are scheduled for publication. Subscription prices are available upon request from the Publisher. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where air delivery via SAL is ensured: Argentina, Australia, Brazil, Canada, China, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, Singapore, South Africa, South Korea, Taiwan, Thailand, United States. For all other countries airmail rates are available upon request.
Claims for missing issues must be made within six months of our publication (mailing) date.
For orders, claims, product enquiries (no manuscript enquiries) please contact the Customer Support Department at the Regional Sales Office nearest to you:
New York, Elsevier Science, P.O. Box 945, New York, NY 10159-0945, USA. Tel: (+1) 212-633-3730, [Toll Free number for North American Customers: 1-888-4ES-INFO (437-4636)], Fax: (+1) 212-633-3680, E-mail: usinfo-f@elsevier.com
Amsterdam, Elsevier Science, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. Tel: (+31) 20-485-3757, Fax: (+31) 20-485-3432, E-mail: nlinfo-f@elsevier.nl
Tokyo, Elsevier Science, 9-15, Higashi-Azabu 1-chome, Minato-ku, Tokyo 106, Japan. Tel: (+81) 3-5561-5033, Fax: (+81) 3-5561-5047, E-mail: info@elsevier.co.jp
Singapore, Elsevier Science, No. 1 Temasek Avenue, #17-01 Millenia Tower, Singapore 039192. Tel: (+65) 434-3727, Fax: (+65) 337-2230, E-mail: asiainfo@elsevier.com.sg

US mailing notice: Journal of Computational and Applied Mathematics (ISSN 0377-0427) is published monthly except semimonthly in April, June, August, October and December (total seventeen issues) by Elsevier Science B.V. (Molenwerf 1, Postbus 211, 1000 AE Amsterdam). Annual subscription price in the USA US$ 2254.00 (US$ price valid in North, Central and South America only), including air speed delivery. Application to mail at periodicals postage rate is paid at Jamaica, NY 11431.
USA POSTMASTERS: Send address changes to Journal of Computational and Applied Mathematics, Publication Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003. Air freight and mailing in the USA by Publication Expediting.

Submission of manuscripts
Manuscripts can be submitted (in threefold) to any of the Principal Editors. *Algorithms* should be sent to the Algorithms Editor. Contributions for the '*Letter Section*' should be sent to any of the Editors of this section.

Authors' benefits
1. 50 offprints per contribution free of charge;
2. 30% discount on all Elsevier Science books.

Instructions to Authors
Submission of a manuscript is welcome provided that it, or any translation of it, has not been copyrighted or published, that it is not being submitted for publication elsewhere and that, if the work received official sponsorship, it has been duly released for open publication. Manuscripts should be typed double-spaced on one side of the page only with wide margins. They should be written in English. Each paper should be introduced by a self-contained abstract of no more than thirty lines without long formulas, a list of keywords and subject code classifications in accordance with the current AMS procedures. Upon acceptance of an article, authors will be asked to transfer copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.
There are no page charges. Costs for alterations in proofs other than printer's errors will however be charged to the authors.
References should be ordered alphabetically and should be conformal with the following examples for books [1], papers [2] and contributed volumes [3].
[1] A. Bensoussan, *Stochastic Control by Functional Analysis Methods* (North-Holland, Amsterdam, 1982).
[2] H. Brunner, A survey of recent advances in the numerical treatment of Volterra integral and integro-differential equations, *J. Comput. Appl. Math.* **8** (1982) 213–229.
[3] P.R. Graves-Morris, The numerical calculation of Padé approximants, in: L. Wuytack, Ed., *Padé Approximation and its Application* (Springer, Berlin, 1979) 231–245.
In text, references should be made by giving the reference number within brackets.
Algorithms must be written in FORTRAN, ALGOL 60 or ALGOL 68. Only algorithms which have important applications in numerical and/or applied mathematics will be considered. They must be well documented and well structured. Portability is very important. In particular, as a part of the refereeing process, FORTRAN-programs will be checked with the help of the PFORT-verifier. Authors are requested to send a machine readable copy of the algorithm to the Algorithms Editor, preferably on magnetic tape, with the following characteristics: number of tracks = 9, density = 1600 bpi, character code = EBCDIC, parity = odd, no labels, logical record length = 80 bytes, block size = 400 bytes, record format = fixed, blocked.
Figures are to be drafted in India ink on white paper in a form suitable for photographic reproduction and reduction. Lettering should be uniform of size. Typewritten lettering on figures is not acceptable. Figures should be designated by Arabic numerals and the captions should be typed, double-spaced, on a separate sheet rather than lettered on the figures themselves.
Footnotes should be numbered consecutively and typed, double-spaced, in a separate list at the end of the paper. In the text, footnotes, which should be kept to a minimum, are indicated by superscript numbers alone.

All mathematical symbols which are not typewritten should be specified and listed separately. Unusual symbols or notations should be identified in the margins. Awkward mathematical notations which require special typesetting procedures must be avoided. The numbers identifying displayed mathematical expressions should be placed in parentheses at the right margin.
For the purpose of further correspondence the manuscript should end with a complete mailing address (and a fax and/or e-mail number) of at least one of the authors.

Instructions for LaTeX manuscripts
The LaTeX files of papers that have been accepted for publication may be sent to the Publisher by e-mail or on a diskette (3.5" or 5.25" MS-DOS). If the file is suitable, proofs will be produced without rekeying the text. The article should be encoded in Elsevier-LaTeX, standard LaTeX, or AMS-LaTeX (in document style "article"). The Elsevier-LaTeX package, together with instructions on how to prepare a file, is available from the Publisher. This package can also be obtained through the Elsevier WWW home page (http://www.elsevier.nl/), or using anonymous FTP from the Comprehensive TeX Archive Network (CTAN). The host-names are: ftp.dante.de, ftp.tex.ac.uk, ftp.shsu.edu; the directory is: /tex-archive/macros/latex/contrib/supported/elsevier. *No changes from the accepted version are permissible, without the explicit approval by the Editor. The Publisher reserves the right to decide whether to use the author's file or not.* If the file is sent by e-mail, the name of the journal, *Journal of Computational and Applied Mathematics*, should be mentioned in the "subject field" of the message to identify the paper. Authors should include an ASCII table (available from the Publisher) in their files to enable the detection of transmission errors. The files should be mailed to: Log-in Department, Elsevier Science B.V., P.O. Box 2759, 1000 CT Amsterdam, Netherlands. E-mail: m.griffin@elsevier.nl.
